Postmenopausal is defined formally as the time after which a woman has experienced twelve (12) consecutive months of amenorrhea (lack of menstruation) without a period.

Human postmenopausal Urine collection process: Donor consent forms are obtained and daily monitoring of the collection is reported. Postmenopausal human Urine is immediately frozen after collection.

Please inquire if urine has to be never frozen, if pH has to be adjusted or if a preservative is required. We are able to custom the collection to meet your requirements

PERIMENOPAUSAL URINE CAN BE MADE AVAILABLE. (transition period to menopause)

Bulk pricing on Postmenopausal human urine from 1000 ml to 50 liters single donor can be made available. We do not stock. All orders are custom filled. 4-5 weeks lead time required.

We also offer other Biological Fluids such as Human Cord Blood, Human Breast Milk, Human Pleural Fluid, Human Saliva, Human Semen and various types of Human Urine for your research. We continuously collect for our current production requirements.
