

Certificate of Analysis

Product:	Bovine Chymotrypsin
Catalog Number:	IRHPL0093
Lot Number:	SAMPLE
Size:	100ug
Purity:	>90% (SDS-PAGE)
Source:	Bovine Pancreas
Form:	Lyophilized
Storage:	-20°C
Expiration Date:	Varies

Description: Bovine Chymotrypsin is a serine endopeptidase produced by the acinar cells of the pancreas. Chymotrypsin becomes activated after proteolysis of chymotrypsinogen by trypsin. While trypsin hydrolyzes at lysine and arginine, chymotrypsin selectively cleaves peptide bonds formed by aromatic residues (tyrosine, phenylalanine, and tryptophan) (Hedstrom et al.1992). Two predominant forms of chymotrypsin, A and B, are found in equal amounts in cattle pancreas. They are very similar proteins (80 identical), but have significantly different proteolytic characteristics (Hartley 1964, Melounet al.1966, Smillie et al.1968, and Grfet al.2004). The information below pertains primarily to the A form of chymotrypsinogen and chymotrypsin.

Optimal experimental conditions and working dilutions must be determined by the end user. Sample concentration and volume are for example purposes only and do not necessarily represent the product that will be received. Please contact us for a current lot-specific product datasheet.

This material is intended for research use or for further manufacture of in-vitro diagnostics products only. The material is not for use in products licensed under Sec. 351 of the PHS act. The user agrees to indemnify and hold Innovative Research, Inc. harmless for any use of this product other than that specifically stated.
