**Product:** Normal Single Donor Human Urine

**Catalog:** IR100007

**Volume:** Select Option

**Quantity:** Select Option

**Description:** Normal single donor human urine is collected fresh from normal, healthy individuals. Human urine is a liquid product of the body that is secreted by the kidneys and excreted through the urethra. Cellular metabolism generates numerous waste compounds, many rich in nitrogen, which require elimination from the bloodstream. This waste is eventually expelled from the body in a process known as micturition, the primary method for excreting water-soluble chemicals from the body. These chemicals can be detected and analyzed by urinalysis. Aside from water, urine contains an assortment of inorganic salts and organic compounds, including proteins, hormones, and a wide range of metabolites. Normal Human Urine can be obtained by age, gender, and race if requested.

**Expiration:** Freshly collected human urine is stable for 28 days after the date of collection when stored at 2-8° Celsius, and is stable up to 3 years when stored at -20° Celsius or colder.

**Handling:** This material is sold for in-vitro use only in manufacturing and research. This material is not suitable for human use. It is the responsibility of the user to undertake sufficient verification and testing to determine the suitability of each product's application. The statements herein are offered for informational purposes only and are intended to be used solely for your consideration, investigation and verification.
